## **CleanBC Better Homes New Construction Program: Builder incentives**

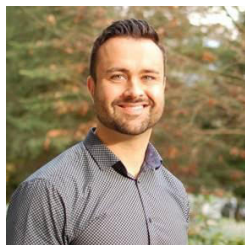

**Pre-registration is required please [here](#)**

### **Description**

The CleanBC Better Homes New Construction Program provides rebates up to \$15,000 for the construction of new, high-performance, electric homes. Through the CleanBC plan, the Province is supporting the adoption of the BC Energy Step Code and making energy efficient, climate-friendly homes more affordable and accessible for British Columbians.

We will discuss rebate incentives for Part 9 homes built to higher steps of the BC Energy Step Code using electric space and hot water systems, installing efficient heat pump systems, and working with energy advisors

### **Presenter**

**Adrian Kanjer**

**MS, CEM - Project  
Manager, Residential  
Construction Program,  
Hydro**

\*Pre-approved CPD credits by BC Housing is pending

**New  
BC**

Adrian is an Energy Consultant who can identify energy saving measures and ways to optimize building performance in order to reduce costs, enhance health and comfort, increase performance, while protecting the environment. Adrian has over 12 years experience in energy management, construction design, project management, and business development. He was previously an Energy Specialist at BCIT and at the Burnaby School District, responsible for implementing energy conservation projects across over 100 schools and facilities to save costs and reduce GHG emissions. He has also led the design and construction of a near net-zero energy consuming house in BC. Adrian is accredited in energy management, construction management, and architectural building technology. His role is to raise awareness of the CleanBC Residential New Construction Program to builders and energy advisors throughout BC, provide information about the program and the benefits of building energy efficient electric homes
